Abstract

The Magna Carta endeavored to create peace by protecting the various rights of land barons in the United Kingdom, while the United States Constitution endeavored to protect the freedom and sovereignty of American citizens in a newly created Constitutional Republic. It has become clear following hundreds of years of further human experience that an additional consideration regarding creator and inventor rights need to be addressed as well, which is the premise underlying this white paper. Protections are needed well beyond land and personal rights to safeguard the most sacred aspect of a human being, our ability to create and be innovators. Creation represents the deepest core of what all human beings do as we bring forth new ideas and visions conceived from thoughts that arise within us that are subsequently made manifest within this realm.

Without most of us realizing it, we have in various ways engaged in a financial sector that have unfortunately exploited rather than nourished and supported the creative essence of a human being, and in doing so, we have unintentionally corrupted our very own nature. While there is no need to blame one another, this does represent a remarkable opportunity for us to see what has transpired as a result of these choices. A long-overlooked consideration regarding creator exploitation and inventor rights within entrepreneurial finance has not been contemplated in the larger context of human freedom, and upon sharing this realization, a clear approach and methodology will be shared that can potentially assist us to get back on track and back into alignment within ourselves.

The additional consideration of inventor rights represents a natural extrapolation of the intentions behind both the Magna Carta and the United States Constitution because it goes well beyond our physical freedom to include the deeper spiritual liberation of a human being. In choosing to honor one another and the inherent creative capacity of humanity through the realm of finance itself, we can begin to directly retool a financial system that has been integral in facilitating this entire scenario to transpire. By subsequently engaging a new methodology with a different value system, we can better ensure a future where inventors or visionaries from any nation, race, creed or culture will no longer be inadvertently exploited.

This paper will next share and discuss a potential solution through the introduction of a simple looking financial structure that is imbued with traditionally feminine principals designed to protect creators within the entrepreneurial sector. Should this model begin to be adopted and fueled by with the power of the people, this could drive towards building true critical-mass capacity to challenge the ‘goliath’ of greed that has been created and fed over the last 100 years of antiquated financial policies. What will be further revealed, is precisely how such a small yet highly consequential shift in dynamics, intention and structure could potentially act as a powerful spear to the heart of tyranny. Through strategically addressing additional issues that have undermined the maximum efficacy of the United States Constitution’s intention to protect

personal rights and personal sovereignty, the introduction of this new model offers a fresh approach to align the investment sector with the original vision of our Founding Fathers. Through directly honoring this theme in finance, this new model can potentially inspire and create a collective realignment of countless other sectors as well, increasing the likelihood that Americans will actually begin to experience the splendor of freedom these souls envisioned for their Constitutional Republic so long ago. Fortunately, because the financial system represents such a deeply intertwined global web, the repercussions of these actions could subsequently and organically impact all of humanity itself.

Simply speaking, by protecting the rights of our inventors from various long-occurring dynamics within the entrepreneurial sector, we can mitigate the endless cycle of mergers and acquisitions generally forced upon inventors in entrepreneurial finance since the 1970's. This in turn will begin to organically put an end to the creation of oligopolistic dynamics that have led to dangerous power imbalances globally. These imbalances do not serve the interests of long-term peace because with any imbalanced power scenario, there will be incessant conflicts and disruptions in an effort to return to a state of balance. By providing a different alternative to this financial approach, we can simultaneously protect inventor rights and their freedom, along with our collective freedom. By streamlining intentions, there is an increased likelihood of more entrepreneurial successes and better investor returns. Although this may seem like a lot of considerations, this scenario is like pulling the right string in a tangled knot and as one pulls, the knot effortlessly unravels itself without much effort. Everything in this scenario is interrelated and therefore, the key is choosing the right string to pull, which represents the missing link in an ongoing financial puzzle that has dramatically hindered our access to new innovations as well as our freedom.

In the interest of clarity, the ultimate goal of this model is to raise all ships across all nations, as we begin to transmute a situation together that has driven many sectors far outside their original alignment with noble intentions with catastrophic consequences. The philosophy and motivations behind this model are different. Rather than exploiting a failing financial dynamic, the goal is more so to expose the flaw in our collective thinking and perspectives while successively providing a solution that may benefit everyone, including perceived 'competitors'. The intention behind this model will therefore not be the destruction of our current sector infrastructures, but to assist in realigning them based on a different value system, grounded in a more holistic understanding of the role of finance in our existence. By better serving all parties, we can chart a new course for humanity to experience the destiny we know in our hearts to be possible. This possibility becomes feasible should we choose to work together while respecting and understanding natural law, accompanied with love and compassion for our inventors and innovators, ourselves and each other. This new approach can logically, pragmatically, and practically create a more vibrant dynamic for innovators whilst also enabling a different level of abundance for all stakeholders. By introducing an alternative financial model where innovation

itself actually begins, embodied with a higher value system in service to creation while also respecting the interconnectedness of all life, we can anticipate a different set of outcomes that are more reflective of the true brilliance, capacity and promise of humanity.

Introduction

This author has long been curious as to why the problem of financial tyranny has never been fully resolved after centuries of attempts to do so. Perhaps this has transpired because most of humanity has not been made aware of the conditions that create tyranny, or that society did not fully recognize the implications of various mechanisms quietly put in place over many years without their input, awareness or approval. Assorted distractions elsewhere regarding ensuring our own economic survival, sociopolitical turmoil globally or ‘the coliseum’ have also very effectively taken our attention away from perceiving these insidiously destructive issues as well. Although some small financial pieces have been engaged, the core issues that drive these negative financial dynamics on a collective scale have not yet been fully addressed.

For example, while many laws and principles have prohibited usury dating back to the Sutra period in India between 7th to 2nd centuries B.C., along with ongoing later efforts within Islamic, Christian, Buddhist and Jewish traditions, these comprehensive efforts throughout history could not have anticipated the true nature of how the exploitation of humanity would transpire over time through various financial practices. Usury has been generally defined as inappropriate or egregious interest rates applied on loans that enrich the lender to the detriment of the receiver of those funds. Often referred to as a “debt trap”, this practice has been used throughout the centuries to cause harm by creating a dynamic of personal enslavement rather than helping one’s neighbor. While various forms of indebtedness have resulted in individual human enslavement throughout history, this paper aspires to take a deeper dive on the issue of how collective enslavement can transpire well beyond individual usury, while offering a potential solution to address this issue.

The most recent chapter in this centuries-long drama began in 1919, with the introduction of two regulatory precedents. The determination of whether this dynamic was inadvertently or intentionally put in place will be left to historians to discern; however, it is imperative for us to understand the gravity of the situation currently at hand in order to turn our collective ship towards safer waters. Although the Founders of the U.S. Constitutional Republic worked tirelessly to foresee and undermine any scenarios that could potentially enable tyranny to take root, in recent times their vision has become decidedly subverted through an obscure and rarely considered sub-sector in finance, hidden interestingly within our lauded policies and investment structures theoretically designed to protect investors. Of course, over 245 years ago, these Founders could never have anticipated these various policies brought forth within the last century, particularly regarding the West’s definition of fiduciary responsibility and investor primacy. With these two regulatory precedents, the highest return for investors became the most

important job of a company, along with legal consequences for the board and management team should they prioritize otherwise. The final ‘nail in the coffin’ has ultimately taken place over the last 50 years or so through the introduction of the entrepreneurial merger-acquisition (M&A) model, creating a remarkably unfortunate trifecta. While this author believes this to be an entirely unplanned dynamic by those within the entrepreneurial sector itself, this sector may still have become an unwitting player in what ultimately became a ‘freedom-lethal’ combination that developed and has inadvertently led to the direct creation of centralized power. As this standard investment model has become more entrenched and intertwined over time with these previous policies, it has directly led to the creation and establishment of a global, corporate oligopoly, currently expressed through very powerful, multi-national financial conglomerates accountable to no nation, nor any citizen.

Inventors, creators and visionaries have been subsequently roadblocked in bringing forth their new inventions that do not serve, or are in direct competition with, the financial interests of these conglomerates. This situation represents dramatic consequences for the evolution of humanity itself, because we have been prevented from moving forward as a global populace, certainly as far back as Tesla and his free energy innovations, and likely much longer. This dynamic has severely stunted our growth as a human society in how we care for this planet, and how we care for one another.

In spite of the seemingly enormous, almost impossible challenge of attempting to disarm this dynamic, there is reason for tremendous optimism because we as the global collective presently have transparency and visibility available to the masses unlike any other time in history. Prior to this period in time, it has not been feasible to see and understand the interplay of these complex global dynamics at such a magnitude because they were simply imperceptible to the common person. However, ‘we the people’ are in a unique position today to see this dynamic, and consequently reclaim our power and thus our true destiny. By consciously coming together from all walks of life, backgrounds and cultures, and fortified with a few new tools, we can begin to work with one another to earnestly address these underlying threats to our collective freedom.

This author strongly recognizes and appreciates that humanity as a collective is a formidably powerful force on this planet. This power stems from the fact that each of us as individuals have different ways of ‘seeing’ along with different cultural perspectives that allow us to perceive reality differently. By actively engaging and appreciating these differences, our ability to advance much more quickly is amplified in a multi-dimensional manner, rather than pursuing exclusively one perspective at a time in a linear manner. Due to this innate and interconnected strength, it would truly serve us to work together. Although this author writes from her origin as an American citizen, she has lived and worked in Europe while traveling extensively over the last 20 years to research these complex dynamics as well as experience different cultures. The gift and grace of this first-hand experience has enabled her to innately acquire a broader global lens

and perspective, and as a consequence, the vision described in this paper aimed at untangling these intractable financial challenges will address the concerns of all citizens globally, rather than any one particular nation.

Undermining the Vision of the Founders

As mentioned above, the United States Founders endeavored to create a fool-proof document that protected the rights of their citizens within their new Constitutional Republic. This document expressed such a powerful written intention that it changed the nation-state landscape, as well as the history of mankind, subsequently becoming enshrined in the National Archives of the United States. This beautifully demonstrates the pen is indeed mightier than the sword to effect real change and although the original challenges that inspired the birthing of the US Constitution have not yet been fully addressed, resolved or eradicated even today, tremendous progress has been made towards that end.

In the Constitution of this new nation, the financial sector was not directly addressed and it ultimately became the key factor that eventually betrayed their great vision. With the creation of the financial trifecta mentioned above, this situation created an unholy trinity of sorts that ultimately undermined this vision at the core. It has effectively threatened the very sovereignty of the nation they created and impacted individuals from all nations, as it falls well beyond the considerations of usury. In fact, this financial methodology has effectively stripped away the basic rights of certain of our most treasured global citizens represented by our inventors, innovators and visionaries from every nation through a widely used yet unquestioned investment scenario.

While some may declare the issue of basic usury was initially addressed in the U.S. Constitution on the State level by the 'Commerce Clause' (Article 8), this broader financial exploitation issue has still not been addressed on the State or Federal level, nor on a global level, anywhere. Unfortunately, this same trifecta currently poses a serious and continual risk of nurturing the creation of tyrannical dynamics here in the United States and around the world. The reason being that the creation of such a large financial oligarchy makes it much more challenging to protect citizens from censorship and the loss of free speech rights. These large monoliths control many sectors including the media as their mouthpiece to the masses to influence minds, with little recourse due to the breadth of their reach. This is the perfect example of the adage 'total power totally corrupts' and the accuracy of this statement remains.

Thankfully, many realize that we in the United States and those in other nations have come quite close to losing the rights that all of our respective ancestors fought for over the centuries. Although the experiment represented by the United States along with its Constitution and guiding principles may have some imperfections, it remains one of the best prospects for humanity to enable and secure its own freedom. Because the Founder's original vision has

indeed been deeply corrupted by the financial sector and upon seeing the nature of this situation clearly, we have an opportunity real-time to begin to rectify this situation.

Beyond Usury, The Insidious Invisible

Although usury has been exceptionally well defined as a typical culprit in nefarious financial enslavement scenarios, what has not been foreseen and therefore not addressed is something much more challenging, embodied within an opaque system that can effectively enslave the entirety of humanity. The source of this ‘something’ is unfortunately quite benign looking, remaining mostly hidden and guised of course in ‘good intentions’ while representing one of the most significant threats to collective human freedom to date.

However, there is another hidden aspect in finance regarding both usury and the M&A model that is potentially even more insidious in unsuspected ways. Usury has been consistently seen from an exclusively one-dimensional aspect of financial well-being, yet what is occurring with both usury and the more complex financial trifecta is a much more nuanced aspect that hits deep within the soul and spirit of a human being. By effectively siphoning off the creative capacity of all of humanity at its essence, what is unfortunately transpiring now is a remarkable mistreatment of the creative force within a human being for financial return. This has occurred through these antiquated policies that have then driven these forced M&A exits for the highest investor returns, and the cost to humanity is frankly inestimable.

Early spiritual doctrines consistently prohibited usury because it prevented a person from benefiting from their own capital. However, what is not addressed with usury laws is the loss of the benefit of one’s own creative energy, and the subsequent cost to one’s spirit on a certain level. The creative capacity itself that is inherent in all individuals has frankly never been considered or addressed by usury laws, and yet this is the insidious, invisible cost that society bears. This dynamic represents a deeper destruction that is occurring within our fellow human beings and most of us are not really aware of it. Should one couple the cost of both usury and an aspect of the trifecta, specifically the M&A model used within the multi-trillion-dollar venture capital industry that generally demands a sell-out of one’s innovation as well as one’s sovereignty for simple start-up capital, the magnitude of the loss becomes simply overwhelming. This is the deeper invisible culling of an inventor’s intellectual and creative energy as a human being themselves, which is being taken or exploited for monetary gain by others. This egregious dynamic is something that blithely occurs every day in the entrepreneurial sector, and because it is commonplace, it is never challenged. This dynamic has generally not been seen, nor spoken of very often, and yet it represents the deepest hidden shadow of our current financial industry. Most of us have never really sat back and thought about this because it is ‘just the way we do things.’ If an individual inventor becomes aware of this and still chooses this dynamic for their own personal reasons, that is one thing; however, if they refuse, here is where the problem arises. Although this may be initially difficult for us all to see and reconcile within ourselves, this consideration will become instrumental as we intend to truly address and rectify the failings of the financial industry. As we move forward in creating our new financial dynamics, it will be

helpful to recognize the importance of free will in a balanced investment scenario, as well as the costs to one another in our financial dealings; otherwise, any new mechanism created will again become profoundly corruptive to ourselves and to society, as we have witnessed with the current dynamics.

Realizing that rather than loans or bond investments, inventors really do offer the particular advantage of bringing positive societal change well beyond potentially higher returns for investors. This may be helpful to remember, as we are often thinking too small in this ‘creative’ dynamic when our focus is exclusively on the financial outcome, as it consequently restricts or contracts the ability of innovators to move humanity forward as a collective. Forcing the sell-out of that innovator is not a reasonable nor logical approach when one considers the bigger picture, which is the only logical perspective to consider due to the true nature of our collective entanglement. In the end, inventors bring something truly unique to the table. There really is a need to find a way to share in that upside in an honorable way for investors, because an inventor should not have to forgo ownership of their own technology or company simply because they need some start-up capital.

[An Unprecedented Moment in History](#)

The benefit of living in this moment of unparalleled international connectedness and increased transparency is that we clearly see the errors of the past, and we have the opportunity to correct them. We now have the ability to consciously collaborate globally with all voices at the table, working to ensure that we have looked at the positive and negative implications of our policies over the short and long term for all of human society and all of life in a collective manner. This represents a truly unique time in human history. The beauty afoot is that we can see how our policies can alternatively drive behavior towards the beneficial side of the behavioral continuum, or not. Human nature of course has the capacity of experiencing an entire range of behaviors. It would be helpful to consciously create structures and guidelines that incentivize the best of humanity, rather than the approaches we have seen over the last century that effectively incentivized greed and exploitation of one another.

[A Solution Embodied within the Sovereign Revenue Trust Entity®](#)

There is a building consensus that these consequences of the current financial industry have become too burdensome for human society and as a result, a means to create a more balanced approach has become a matter of high priority. Rather than more regulation, this rebalancing could begin by intentionally creating an alternative investment dynamic where we collectively no longer look at individuals who create and bring forth the prospect of valuable advancements for humanity and the planet from such an exploitative perspective, nor take for granted the funds from well-intentioned investors who seek a respectable return on their investments. This course correction will occur by purposefully aligning both inventor and investor intentions from the outset at the entrepreneurial stage, by honoring and respecting the financial strength brought by the investor, while simultaneously supporting, strengthening, and nurturing our inventors.

An Alternative Asset Class

The Sovereign Revenue Trust Entity® or SRTE® will offer a new means of raising start-up, entrepreneurial financing and other forms of funding as a unique patent-pending ‘hybrid’ investment entity, representing an alternative asset class in finance connected to its own secure blockchain. Directly embedded within the structure itself is the intention to ensure the free will and sovereign rights of an inventor or innovator are retained within the investment dynamic. Being both a fungible and non-fungible entity, it can act as an FT (fungible token) or an NFT (non-fungible token) on the blockchain, and its position within the financial landscape will generally fall between two multi-trillion-dollar financial sectors represented by the venture capital/private equity sector and the cryptocurrency sector.

The SRTE® specifically addresses innovators’ rights to maintain their own sovereignty during a capital raise; a critical consideration heretofore missing within the venture capital (VC) model to the detriment of inventors and investors alike. Inventors using the SRTE® platform will be able to retain the right to exercise their free will regarding how and whether they choose to stay private and sovereign, go public, or get acquired within the fundraising dynamic, along with their right to choose to engage exclusively revenue shares, or a combination of equity and revenue shares, to provide investor returns. The presence of the SRTE® effectively enables innovators to make the most appropriate choices to ensure the best interests of their innovations, their company, and their investors without potentially diffusing their new company’s energy by burdening them with external investment agendas, timelines or goals of the various investment platforms raising their funds. The SRTE® puts the focus back on the well-being of the company itself where it should be, and this is directly in the interest of any company’s investors. The shift in these investment dynamics could potentially support and enable higher investor returns by creating greater efficiencies, by removing the ‘middleman agenda’ while fostering an environment of mutual respect amongst all parties. The SRTE® model could hypothetically impact the venture capital industry along with the future trajectory of the financial sector itself, because for the first time, it directly addresses long-marginalized inventor interests who feed and drive both industries. In fact, according to broader economic analyses regarding the S&P 500, intangible assets, which largely include intellectual property but also other assets like brand value, patents, copyrights, etc., account for a significant portion of market value. In July 2022, it was reported by Ocean Tomo Research that ‘intangible assets’ made up approximately 90% of the S&P 500's total assets, indicating the dominance of companies whose value is primarily based on IP, rather than physical assets or the value of sales or the success of a company. It is time the true contributors to our collective financial well-being and economic viability are treated with the respect they deserve, and appropriately honored within these industries.

The Conception

The SRTE® itself was initially conceived to protect innovators from the exploitative dynamics experienced within the entrepreneurial sector. By providing a tool for inventors and investors to join together in a more balanced dynamic with mutual respect as a foundation, humanity can

begin to actively realign the financial sector itself to more noble values that exist within the human heart. Through better supporting the brilliance of what humanity creates through our genius innovators and visionaries in finance, we can simultaneously provide a framework for viable long-term peace through balancing critical power dynamics, which is good for all businesses and therefore investor returns as well.

This structure aims to protect the rights of all innovators within the investment sector regardless of their nation and their place of birth, with the potential for far-reaching consequences. In a sense, the SRTE® may represent one of the first tools for humankind to directly reclaim their rights within the financial sector to their own selves, and to what they contribute and create of their own heart, mind and hand. Although this vision initially came to the author as a Divine inspiration, it is important to humbly admit to entirely and inadvertently stumbling upon these other implications while pondering and working with the meaning of this initial investment solution. In further candor, this particular outcome was not initially intended on the part of the creator of the SRTE®. However, as one logically follows the implications of its introduction from a 40,000-foot view, one may also equally arrive at these seemingly unavoidable conclusions. Regardless of any conclusions pertaining to the solution itself that, a God-given right has indeed been sorely forfeited in entrepreneurial funding for innovators for entirely too long, and an opportunity is at hand to finally rectify this situation for the good of all involved.

Different Values, Different Outcomes

While other approaches within the financial sector have been generally focused on the highest investor return at any cost, the SRTE® holds a more comprehensive vision and understanding at its essence. This author is not likely alone in the belief that this world is not ready to consciously risk or surrender its sovereignty and freedom at any cost through investment ideals that primarily benefit a small minority at the expense of most everything else. Unfortunately, this rather myopic investment perspective where investment returns are prioritized but broader consequences are repeatedly disregarded is what largely drives the current investment community mindset. It is purported; however, that this approach has failed approximately 80% of the inventors, their innovations and their companies who are engaged within venture model portfolios. There is room for improvement.

Being based on a different value system, the SRTE® model itself can lead to a different set of outcomes that naturally create more decentralized power by effectively drawing a new line in the sand of the investment landscape. The simple yet profound physical action of putting the intentions and principles of the United States Constitution into a handwritten document facilitated the creation of a Constitutional Republic, along with a seismic shift in geopolitics on the global stage; so too can the similar action of clearly stated intentions effect change in the financial sector by protecting inventor rights. While the platform itself is investment finance, the broader philosophy behind the SRTE® is aimed at creating an investment approach that

simultaneously supports healing, freedom and peace while offering investment dynamics that respect our creators to advance towards more consistent lucrative returns for our investors. The existence of the SRTE® and the value system it adheres to serves to undermine the inadvertent loss of inventor sovereignty, because its very existence protects their free will within the investment dynamic. As humankind newly begins to exercise their own free will in a new investment dynamic, the antiquated standardized trilogy that began in 1919 will thankfully come to an end with new precedents being created, as mindsets begin to shift.

A different dynamic can arise where sovereignty for all is enabled globally, and where rights are finally returned to citizens that have long suffered some frankly appalling consequences represented through the loss of their innovations, their companies or even their lives. Let us put this chapter behind us.

Where the SRTE® Fits in the Investment Landscape

The SRTE® falls between the two rather large financial sectors of cryptocurrency and venture capital, and therefore, it can potentially reduce certain risks that investors in each of those sectors may encounter. The SRTE® model may provide an offramp for inventors and investors alike by avoiding the U.S. Securities and Exchange Commission (SEC) challenges the cryptocurrency market has been experiencing, while also removing the conflicting agendas and challenges of the VC model. The SRTE® scenario will typically take place at the financial birthing of a new company and specifically during the start-up funding phase, thereby ensuring that the stage is set from inception to best protect creation throughout the life cycle of that innovation. Because it stands on its own without being defined or limited by existing asset classes, it acts as an alternative investment hybrid that can engage individual inventors and investors up to the sovereign level. This model creatively unites the best advantages of blockchain efficiency and transparency, without necessarily being a cryptocurrency, with a more evolved structural alternative to the VC model. As an alternative entrepreneurial asset class, the SRTE® if moved from Regulation D to Regulation A through the SEC upon completion of its funding, could also gracefully open the door to foundation funding opportunities by greatly simplifying the bridge between foundations and the start-up sector. The SRTE® is not necessarily a security or commodity in certain respects and represents an alternative asset class. However, for the sake of simplicity until new legal or regulatory policies emerge, the SRTE® shall abide by current SEC regulations, until such time that new policy has been agreed upon and made public. This is mentioned and becomes highly relevant for the SRTE® because in taking this approach during its introduction into the financial landscape, there will be no pushback issues with the SEC or other regulatory bodies that could have serious negative investment consequences for its investors.

A New Merging

The SRTE® represents the first multi-dimensional investment vehicle of its kind designed in effect to create a merging of spirit (intention) and form through the structure of a financial instrument, well beyond the simple venture-cryptocurrency consideration. This intentional model

exemplifies a truly unique and powerful introduction into the financial landscape. The soul of the SRTE® structure serves to act as a protector of creation in finance, and is pioneering an alternative asset class in both structure and consciousness for investors and inventors, with collateral benefits for potentially all of humanity. Beneath it is the hypotheses that we as a global community have not yet begun to understand or experience what true abundance can look like. This is either due to our general ignorance of universal law, or our insistence to continually operate outside of universal law that all is inescapably interconnected. The SRTE® model however understands that nothing in the natural world operates within a vacuum, and as such, this model endeavors to act in concert with the undeniable interconnectedness of all stakeholders.

Candidly, a new model is needed that can offer a lucrative investment potential while also driving towards economic stability, as well as decentralized and balanced power dynamics. This can lead to peace by delivering more honorable financial returns, along with the collateral benefit of enabling collective human freedom. This is now a real potentiality, and these goals are frankly essential in order for humanity to prosper and evolve because innovators will newly be enabled to maintain their personal and company sovereignty, as will the Sovereign Nations they reside within. As a new financial structure designed to mitigate our currently unconscious, archaic models, one could say it represents a new leap in financial consciousness. It is in all of humanity's interest to build strong companies to better ensure their long-term success, which bodes well for all stakeholders while enabling global stability. Because it addresses quite a number of collative interests, this model may potentially be helpful over time to forge a bridge and new alliances amongst individuals previously separated by political or philosophical divides.

Arbitrary Policy and Forced Compliance

There is another parallel example in the natural world that is quite relevant here, and in this instance, it is regarding the approach of an arbitrary policy and its unforeseen consequences. Humanity has learned that the arbitrary decision to remove wolves from Yellowstone to address the concerns of one particular group failed quite miserably, with far-reaching consequences. This priority led to terribly destructive imbalances within entire ecosystems, which fortunately were rapidly recovered upon the wolves' reintroduction. Similarly, arbitrary policies that drive behaviors within the financial sector without a holistic understanding of the interrelatedness of the global environments within which the financial system exists is at best, foolhardy, and at worst, utterly destructive. The dynamic created by unrestricted choices rather than forced choice points and restrictions can therefore be successfully mirrored within the financial sector to the benefit of all stakeholders.

Who Can Use It and What Could This Mean

The SRTE® was created for inventors, investors, and policymakers as well as variously aligned sovereign funds. It serves no one party to achieve outrageous returns at the expense of one's own freedom or the destruction of the planet on which we all live together. As inventors, and particularly key inventors bringing world-changing technologies that will impact multiple sectors

at once start becoming more aware that they can retain their rights, and their free will, while attaining start-up capital using the SRTE® model, we shall likely see a ground-swell of change occur. Many or even most may prefer to redirect their own ship by reclaiming their rights within the investment sector. As these inventors are already cutting edge, it will not be a big leap for them to also be part of pioneering a better financial model that actually serves their own interests.

Investors may begin to realize they too want to support these types of inventors while no longer having to inadvertently participate in a dynamic that has led to the potential loss of their freedom, or that of the inventors whom they want to support. They can potentially improve their odds of a successful investment simultaneously through such an alignment, inspiring them to join in support of inventors steering this new ship. As both parties begin to more deeply align behind a common vision, a true movement may be born which can gain momentum at an accelerated pace, as the old systems buckle under their own weight. As Buckminster Fuller stated which has never rung truer, “You never change things by fighting the existing reality. To change something, build a new model that makes the existing model obsolete.”

Going Quantum: An Evolutionary Leap in Consciousness

In effect, quantum understanding is now thankfully entering entrepreneurial finance through the introduction of the SRTE® by purposefully aligning intentions, and leading to dramatically increased efficiencies in systems by amplifying creative energy, and harnessing it to propel action towards optimal outcomes. Because money itself is inherently a neutral structure as a medium of energy exchange between two parties, this quantum understanding can logically translate into finance, albeit with some appropriately designed tools. In fact, creating an intentional alignment between all stakeholders in a company through a financial structure designed to streamline all energy and efforts behind that company will address many inefficiencies inevitably resulting from conflicting agendas caused by ‘financiers in the middle’, particularly when an inventor merely needs some simple, uncomplicated start-up capital.

Simply by its presence in the investment scenario, the SRTE® can organically begin to mitigate the unconscious drivers of greed and power that have led to the misery of all life on this planet for thousands of years. By currently bringing awareness to this issue as a shift in priorities is progressively embraced, it becomes clearer that it is time to end this cycle, and a more logical approach of prioritizing creation over money is an idea whose time has come. By replacing these old, insidiously destructive structures, humanity newly has at its disposal a tool to consciously propel our collective future onto a different trajectory - one that encourages honor, integrity, transparency, love and respect for one another’s contributions to the collective human experience and our world. This is not some Pollyannaish idea; in fact, it is in all our interests to do so. If this premise is challenged, simply take a good look around at the world we have created, and ask yourself if this is the best that humanity has to offer. In fact, the SRTE® deliberately employs, through the power of its intention and structure, a wiser alignment and understanding that was brilliantly declared by one of our greatest inventors, Nikola Tesla. He stated that the Universe is

essentially energy, frequency, and vibration. Had this model existed during his lifetime, it could have served him remarkably well, as his primary investors did not share an agenda aligned with his intentions, but served their own with unfortunate consequences for us all so many years later.

The intention behind the SRTE[®] is truly unlike any other within the realm of entrepreneurial finance. By honoring the intention with the creator as a priority, not just financially but regarding the actual new invention itself, the purest and highest expression of that invention will more likely be attained. This will bode well for the actual investors in these inventions, and it stands in direct opposition to the intention to attain the highest possible return for investors at any cost. This subtle shift in intention regarding entrepreneurial investing represents something quite comparable to the butterfly effect in quantum physics, where small causes or changes can create very large impacts and consequences in non-linear, complex and dynamic systems. Due to the entanglement theory also being recently proven in physics, these phenomena are no longer a nice idea, but represent a deeper understanding of the reality within which we all find ourselves. It would help us to consider operating within this understanding of reality rather than outside of it, as these dynamics will occur regardless of whether we agree with them or not.

Challenging a Perception

It is an appropriate moment to challenge an unconscious yet highly inaccurate perspective that exists concerning the following concept: When an investor or investment fund does not focus exclusively on the financial return itself, perhaps being focused on other priorities, the investment itself will not generate a viable return. This is a fallacy that must be challenged. Of course, the low success rate of the current model is not in a strong position to support such a perspective; however, there is a deeper rationale that supports the antithesis of this hypothesis. Alignment of intention is the most efficient means to achieve the highest outcomes. This conclusion is a logical extrapolation from experiences demonstrated with electrons through certain advanced quantum technologies that will be forthcoming in the near future. The creator of the SRTE[®] was fortunate to have been directly exposed to this awareness through her own due diligence with these technologies, and the parallel in finance became quite obvious to her. Because our existing approach to finance is primarily focused on a particular financial outcome within a set time frame rather than paying careful attention to the ‘right next step’ in any real-time dynamic, the ability to ensure the highest overall outcomes for any new innovation cannot and will not be realized. The ‘proof is in the pudding’ and is currently evidenced by the ~80% failure rate in the entrepreneurial sector.

Evolving Beyond the VC Model

While the VC market has brought forth some incredible innovations, there are still so many that are not served by this structure, and their overall success rate of the model hovering around 20% infers a remarkable opportunity for improvement. While VC models are generally considered to be on the decline due to their poor success rates overall, the SRTE[®] is primed to capitalize on the discontent that has been rising around the industry due to sometimes corruptive dynamics expressed through questionable practices along with poor outcomes, and an approach that can sometimes be described by inventors as predatory.

However, although the venture model itself is flawed, Venture Capital and Private Equity firms do represent a wonderful potential collaborative opportunity for the SRTE[®] and investors in general. The venture sector offers a wealth of impressive skills and expertise garnered from years of building companies, and they themselves could also benefit from potential licensing arrangements with the SRTE[®]. The SRTE[®] has the advantage of potentially offering earlier liquidity to VC/PE funds prior to any exits within their current portfolio companies, as well a potentially reducing additional dilution to earlier investors if the approach is approved by their current equity shareholders. This situation provides an absolutely ripe occasion to engage a complimentary approach that is aligned with ensuring the success of all portfolio companies, while also endeavoring to improve success rates which would likely be in the interest of most innovators and investors.

It is important to remember as we transition these various sectors that we do not ‘throw the baby out with the bathwater.’ As has been stated throughout, those in venture capital, just like in many other sectors, have often been obligated to play in a model that may not represent their values or intentions, and yet they are required to engage and focus in a certain way due to investment regulation. In defense of VC’s, it is the model itself that is fatally flawed and yet their industry knowledge and expertise, strong networks, business and marketing management can offer many advantages in a joint endeavor with the SRTE[®] for all parties. A new synergy between these two investment structures could truly offer a potential win-win-win for all parties pending synergistic ideologies.

Secondly, a new dynamic created through the adoption of the SRTE[®] actually represents the best interests of all stakeholders because the ‘middleman’ funding agenda is effectively removed from the equation. Through the introduction and engagement of the SRTE[®], this harmful dynamic can be logically mitigated by stacking the odds for a successful venture through intentionally aligning divergent, often unspoken funding agendas in favor of the inventor’s innovation as a first priority. The SRTE[®] model therefore addresses the faults within the VC model itself, while offering a new means to impact the policy driving these choices.

Also, the interminable search for the often evasive ‘unicorn’ (over \$1 billion valuation) that typically occurs with the VC model leaves so many good potential innovations on the table, along with lost employment potentiality and the means to create more stable, local communities. This represents tremendous lost opportunity for so much innovation, simply because it does not fit into an investment company’s funding model.

[Constitutional Parallels, National Sovereignty and Rebalancing Power](#)

The SRTE[®] model does not force a sellout of one’s technology, intellectual property or company in order to receive investment capital, and as such, the principle of this model is aligned with the Constitution of the United States, where individual free will is fiercely protected. By consciously

bringing this particular group into the protected fold of freedom, we will now consider, assure, and afford those same rights to our inventors that any American citizen has the right to enjoy. More specifically, whereas the United States Constitution addresses exclusively American citizens, the SRTE[®] endeavors to more broadly ensure the rights of all inventors, creators and visionaries universally through the introduction of the SRTE[®] financial mechanism. Should freedom be desired for all people of all Nations, it is an appropriate time to finally include all of our long-forgotten creators and innovators. By protecting their rights within the investment landscape, we can importantly assist not just the United States but all Nations to regain and maintain their national sovereignty while supporting overall national security. Through organically addressing this enormous financially-generated imbalance of power, the SRTE[®] offers a potentially logical means to begin addressing this broader universal challenge.

Adoptability

Regarding the likely adoptability of such a model, consider the following scenario and let us think logically: Would you as a potential inventor of a profound new innovation for humanity prefer to have your options limited regarding how your venture moves forward? Is that a dynamic you prefer in any other aspect of your life by having your choices restricted, or would you appreciate receiving the same respect afforded every citizen under the United States Constitution regarding their rights? Would you be comfortable forgoing this right, simply because you need start-up capital? Lastly, even if you were incredibly clear regarding the direction you wanted to take for yourself and your company in this moment, would you be interested in retaining your right to be able to change your mind?" These rights are taken away in the current entrepreneurial dynamic, and it is time to correct this often-unseen injustice that our innovators have had to deal with for entirely too long.

Upon further reflection, one could likely arrive at the following conclusion regarding this whole scenario. Should the inventors and investors currently engaging a multi-trillion-dollar market sector suddenly change course because they became aware and understood that it was in their personal interest to do so, it would logically follow that this would have considerable ramifications to the current investment landscape. The latent demand addressing this issue could create a real groundswell of change with respect to inventors searching for financing with positive implications for many, as investors too have been actively searching for new ways to improve the likelihood of increasing their investment success rates while lessening their footprint on the planet. If both groups begin to choose a means to engage in entrepreneurial finance that better ensures their own sovereign rights while exercising their free will, we could shift our trajectory towards creating a collective decentralized power dynamic, putting a graceful end to the beast of financial oligopoly.

Regarding potential impact, if the SRTE[®] conservatively captured one half of one percent of the venture market sector over the first 3 years, this would potentially represent a ~\$20 billion market. If this model were only able to capture one fourth of one percent of that market, it would

represent a ~\$10 billion market. This is not insignificant and represents the creation of a real engine for societal change, not just in service to inventors and investors, but to the entire human collective.

Inspiring a New Movement Towards Freedom and Dignity

It has been mentioned that this model could essentially give rise to an ‘inspired movement’ by offering a means for humanity to reclaim its power, sovereignty, honor, and respect from a nameless system that has unfortunately been siphoning off the creative genius of humanity for centuries. This larger system has profited greatly from doing so without appropriately remunerating the actual individuals who have enabled such a cornucopia in a variety of ways. The SRTE® model goes well beyond addressing the financial sector by offering real potential solutions to an assortment of insidious problems in various sectors that have plagued human society for a very long time.

Potentially, it may be the innovators who finally feel protected enough in this dynamic to come out from hiding with their glorious innovations, no longer afraid that their lives or their technologies will be at risk. So many solutions that have long been held at bay, or have even been prevented from moving forward due to competitive approaches supported currently by various global, political, corporate or financial agendas could likely emerge from behind the scenes. As the masses choose to come together behind these inventors by saying no to these old systems and structures, we could potentially see a new world emerge very quickly as these hidden innovations finally begin to see the light of day, rather than remaining unknown and unutilized.

What could be compelling about this approach is that it will likely originate from the grass roots ‘we the people’, where demand is already building internationally for new solutions outside of mainstream structures. Additionally, it could also emerge from a top-down approach by engaging certain indigenous sovereign nations that are currently reclaiming their cultures and legacies as independent nations that existed prior to any colonialism or illegal annexations that took place. This makes logical sense, as these leaders are more closely aware of the interrelatedness of life, and thus resonate with the premise of the SRTE® beyond having no desire to participate any further in exploitative financial practices. As social media increasingly acts as the consolidator of the collective voice, the power of the people is returning, which aligns deeply with the intentions behind the SRTE®. The tide is turning, and all ships will begin to rise with the introduction and help of various new structural innovations such as the SRTE® and others that may be coming forth.

A Time for New Policy

As this issue goes well beyond usury, interest or debt, it may be time to create new policies, regulations or legislation to protect creators from the forced sell-out of an inventor when start-up

capital is needed. Certainly, the rights of our innovators need to be protected in a manner similar to any other citizen to ensure their creative energy is no longer exploited through inadvertently harmful financial practices within the entrepreneurial dynamic. Understanding that it takes time to get new policy implemented, bringing awareness to this issue is an important first step. In the future, it will become important for financial policy be evaluated as to its long-term implications regarding whether those said policies could or would lead to decentralized power or centralized power, as these latter dynamics lead incessantly to conflict, chaos and suffering.

The SRTE[®] provides a tool for policy makers to align, broaden or loosen investment policies, making it possible for the global population to participate in entrepreneurial finance, comparable to their current ability to invest in the stock market or in casinos. It is illogical that this sector is arbitrarily restricted to relatively few high-net-worth individuals, when other areas such as casinos and the stock market, do not share this restriction.

The Feminine Archetype: If We Have Yang, We Need Yin

The feminine archetype in finance has not been something we have seen or experienced in the public or private markets, and yet one may appreciate how these principles could indeed unravel this entire dysfunctional dynamic in finance. It would be refreshing to see the balancing of the yang or masculine energy in finance by bringing this yin energy into the picture, by expressing the wisdom to create, nourish, nurture, support and protect new innovations coming into existence from the minds and hearts of humanity to be expressed in our physical world. Most cultures understand that these ancient principles of yin and yang, or feminine and masculine, need to be balanced. This concept describes how clearly opposite or contrary forces may be interconnected and complimentary as well as interdependent. We can clearly see the outcome of its absence in the financial world today in relation to what has been created without those qualities reflected in financial policy decision-making. A one-winged bird cannot fly and will ultimately crash, not dissimilar to where our current financial industry is headed.

In fact, there is an even greater parallel between inventions and having children. Understand for most inventors and creators that their creation is their ‘baby,’ conceived in the mind of that inventor and then nurtured, nourished and protected by that inventor as it comes slowly into physical manifestation. This author has certainly lived this experience, as the ‘baby’ is the creation itself, whether this represents a child, an idea, or a vision. Just as with any parent, it becomes a matter of necessity that the purity and sanctity of that new creation is protected. We can no longer exploit the magic and sacredness of all innovative creation in human society from a financial perspective if we hope to evolve as a society. Therefore, it is an important moment to consider these issues and choose wisely regarding honoring these vulnerable new creations, and the creators that brought them forth.

The United States Constitution represented an entirely new level of consciousness for society and governance. In parallel, the introduction of the SRTE[®] represents yet another level of

consciousness in finance. By balancing the feminine and the masculine in the financial sector, particularly relative to innovation, this represents in effect a more holy trinity for creation in the realm of manifestation. By bringing the feminine into finance to honor the creation aspect of humanity's innovative nature which has never been properly represented and sometimes ignored entirely on any number of levels in this sector, it represents an interesting opportunity, perpetuated through joining the consciousness of the masculine and the feminine, with the consciousness of Creation itself.

Compassion and Transmuting Our Reality

It will be crucial at this painful juncture of awakening to the overwhelming deceit that has occurred in our name that humanity does not fall back to pointing fingers and blaming one another for these problems. If we instead take this opportunity to come together by realizing this dynamic was caused by the policies and procedures that were set in motion a long time before most of us were born, it can ease our transition into the new. In compassion for one another, we can realize that most of us have actually been relatively unconscious as inadvertent parties to these dynamics, and therefore an unintentional part of the problem. Generations have been embedded without their awareness, as most have been simply trying to survive in these convoluted dynamics that we find ourselves within. But generally, most all of us have been a part of these unavoidable scenarios, simply by being individuals existing and surviving in the 21st century. For example, this author has worked in healthcare and in finance, two terribly corrupted sectors. Yet these choices were originally made from an intention to help, without realizing that each of these sectors had been insidiously corrupted at their core by these same corrosive financial dynamics that have undermined everything.

As we each begin to realize this, we are freed to consciously choose a different path by engaging a new system or approach, while some may choose to stay and assist in returning these sectors to their original noble intentions. While clearly not being naïve to the fact that there are those with unhealthy intentions, it is helpful to remember that the vast majority of humanity simply wants to make a respectable living, and have an enjoyable life with the ones they love.

We have the choice to move forward through the eyes of skepticism, fear, judgement or we can choose instead to come together and forgive one another. Justice will be served as the rule of law is gradually returning around the world; therefore, the question becomes what kind of world do we want to build together for our future, our progeny, and our legacy on this planet. As we begin to restore and evolve sectors corrupted by these dynamics to their original intention, we will be much freer as a global society to explore what the nature of humanity is truly capable of. In appreciating this we can join together, empowered to right our ship and sail towards the destiny we ourselves choose, no longer victimized by our past but instead consciously claiming our own rightful destiny.

Conclusion

Although the world is currently on the brink of war or conflict caused in large part by years of deep, international financial corruption, the long-term answer to this conflict will not be violence against one another. As we have seen throughout history, conflicts resolved in such a manner are never of long duration. To address one piece of this puzzle, the SRTE® has been created to reconsider and refashion the often-overlooked yet unintentional driver of conflict within the entrepreneurial industry. The SRTE® represents a more nuanced way for people to come together from all sides and all backgrounds, to reclaim the true nature of humanity which is of love, kindness, compassion, dignity, respect, honor and generosity. We no longer need be defined by others that have inflicted structures upon us that provoke the worst in human behavior, taking us out of our natural inclination to care for one another of generous heart and spirit by driving us into exploitive dynamics that most of us do not want to be a part of. However, the gift of this moment is that humankind can now come together and make a different choice through a new financial system that expresses who we truly are, and what we truly are as human beings. We can begin to consciously drive our future through the intention of love and mutual support, while respecting the creations of one another for the benefit of all stakeholders, and reclaiming our true destiny as part of Creation. This new model therefore represents an interim step until humanity transcends many of these dynamics. We will need stepping stones in this evolutionary process, and the SRTE® is one such offering. As we come to the revelation that in reality there exists yin and yang, or dark and light, perhaps we may also realize in time that this entire experience has served us in our quest as we move towards the ultimate evolution and expression of humanity, LOVE.
